

# SiegelQ — Developer Mode

Test the Free, Pro & Squad experience without paying

---

## What it is

Developer Mode is a hidden, browser-only panel that lets you preview the site exactly as a **Free**, **Pro**, or **Squad** member would see it — instantly, with no payment and no test accounts. It changes only what *your* browser shows. It never touches real billing, your Stripe account, or other visitors.

## Opening Developer Mode

- **Keyboard:** press **Ctrl + Shift + D** (Windows) or **Cmd + Shift + D** (Mac). Press again to close.
- **No keyboard (phone/tablet):** add **?dev=1** to the address, e.g. <https://siegeiq.gg/?dev=1>
- The panel appears in the **bottom-left corner** of the screen.

## The panel

- **View site as:** Free · Pro · Squad
- **Free reviews used:** 0 · 1 · 2 · 3
- **Exit dev mode:** returns you to your real account
- A status line shows what you are currently simulating.

Each choice reloads the page so every part of the site updates correctly.

## Test the FREE plan (3 reviews / month)

- 1 Open Dev Mode and click **Free**.
- 2 Click **0** under “Free reviews used” — you now have all 3 reviews available.
- 3 Go to the **Upload** page. The Analyze button works normally.
- 4 Reopen Dev Mode and click **3**. The site now behaves as if all 3 free reviews are used: the Analyze button changes to “**UPGRADE TO ANALYZE**” and the upgrade wall appears.
- 5 Try **1** and **2** to see the in-between states.

## Test the PRO plan

- 1 Open Dev Mode and click **Pro**. The page reloads.
- 2 The badge at the top-right shows **PRO · DEV**.
- 3 Reviews are **unlimited** — no upgrade wall.
- 4 Pro-only interface is unlocked (e.g. premium AI voice coaching toggle, priority messaging).
- 5 The Pricing page reflects a Pro subscriber.

## Test the SQUAD plan

- 1 Open Dev Mode and click **Squad**. The page reloads.
- 2 The badge shows **SQUAD · DEV**.
- 3 Everything in Pro, plus the team / Squad features.

## Returning to normal

Open Dev Mode and click “**Exit dev mode (use real account)**”. The override clears and the site behaves according to your real signed-in account.

## Important — what Dev Mode does and does NOT do

| Dev Mode DOES                                                                                                                                   | Dev Mode does NOT                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Simulate the front-end experience for each tier — what each plan <b>sees</b> : upgrade walls, plan badge, unlocked toggles, the 3-review limit. | Grant real <b>backend</b> entitlements. Server-gated features — actual ElevenLabs AI voice audio, real clip-processing speed/limits, true subscription status — still follow your <b>real</b> login. |

So “Pro” in Dev Mode shows the Pro *interface*, but a server-enforced Pro feature will only fully work if your real account is Pro (or a demo account). For true end-to-end paid testing — real checkout plus backend unlock — use **Stripe TEST mode** with test cards and a backend test/demo account.

## Resetting the free-review counter

Inside the panel, click **0** under “Free reviews used” to instantly restore all 3 free reviews. (Once dev mode is active you can also press **Shift + D** anywhere as a shortcut to reset the counter — this is now disabled for normal visitors so the free limit can’t be abused.)

## Good to know

- Dev Mode is invisible to normal visitors — there is no on-screen button; it opens only with the shortcut or the **?dev=1** URL.
- It is stored only in your browser (localStorage key `siegeiq_dev_plan`).
